

**PROTEIN SUPPLEMENTED
FROZEN DESSERT COMPOSITIONS**

Abstract

Frozen dessert products, which include high protein content modified oilseed material, are described. The modified oilseed material typically includes at least 85 wt. % protein (dry solids basis) and has a relatively high average molecular weight, e.g., at least about 40 wt. % of the material has an apparent molecular weight greater than 300,000 daltons.
